LARIS

Quote in minutes.

Never guess a price.

The chat-native quotation tracker for Malaysian SMEs.

1. The Problem

LARIS

ILLUSTRATIVE OWNER · 11 PM

She quotes from her phone, between jobs.

- Enquiries arrive as Manglish voice notes
- Supplier prices sit in photos and PDFs
- Quotes are priced from memory, then chased by hand

1.07M

MSME establishments (DOSM, 2023)

39.7%

of GDP comes from MSMEs (DOSM, 2025)

48.7%

of national employment (DOSM, 2025)

61 days

average business payment delay (Experian, 2025)

Slow reply = lost job. Stale price = lost margin.

No Malaysian survey measures quote turnaround, so we are timing it with owners. Sources: DOSM MSME Performance 2025 and Economic Census 2023; Experian State of Credit 2025. The owner is an illustrative persona.

2. Our Solution

LARIS

Customers stay in chat. Owners stay in control.

01 ASK

Customer asks on Telegram or WhatsApp, in text or a voice note.

02 UNDERSTAND

ILMU turns the message into items and quantities.

03 PRICE

Rules price it from the cost book and apply a margin floor.

04 APPROVE

The owner approves with one tap. Staff never see margins.

05 TRACK

Quote is sent, tracked, exported and chased automatically.

The AI reads. Rules price. The owner approves.

3. What It Does

LARIS

Chat and voice enquiries

Text or Manglish voice notes on Telegram, read into items.

Rule-based pricing

Cost book, margin guard, stale-cost alerts. No AI price.

Catalog from a photo

One shelf photo becomes reviewable items (Qwen2.5-VL on RunPod).

Availability and quote asks

Customers ask "is it available?" and "quote 50 kg".

Price lists in, quotes out

PDF, photo, XLSX, DOCX, CSV in. PDF, XLSX, CSV out.

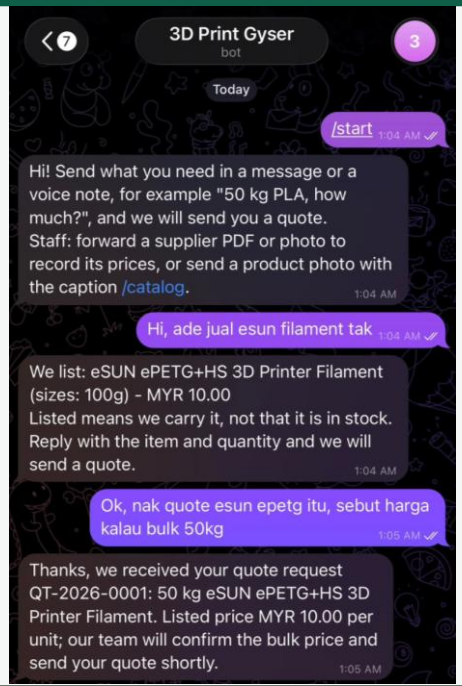

Owner control

Approval step, roles, audit log, tracker and reminders.

Telegram is live. WhatsApp is built and waiting for Meta setup.

See It Work

OWNER'S SCREEN

Draft QT-2026-0001

NEEDS REVIEW

Item	**eSUN ePETG+HS 3D Printer Filament**
Quantity	**50 kg (customer asked in Malay)**
Listed price	**MYR 10.00 per unit (100g size)**
Bulk price	**Owner to confirm**

Approve and send

Voice notes follow the same path

Left: real Telegram screenshot. Right: owner screen recreated. Synthetic sample data.

4. Why LARIS

	Chat and spreadsheet	Accounting / ERP	LARIS
Works inside the chats customers use	✓	✗	✓
Reads voice-note enquiries	✗	✗	✓
Price comes from rules, never AI	✗	~	✓
Owner approval and audit trail	✗	✓	✓
Reads supplier lists and shelf photos	✗	~	✓
Ready without an IT team	✓	✗	✓

✓ yes ~ partly ✗ no. A comparison of tool categories, not named products.

5. Impact

LARIS

SDG

8

Target 8.3: support growth of micro, small and medium enterprises

Minutes from enquiry to sent quote

Baseline: owner timing sessions in progress

PHASE 2 TARGET

-50%

Enquiries answered within 1 hour

Baseline: being measured

PHASE 2 TARGET

90%

Sent quotes on a stale cost with no warning

Today: nothing flags a moved price

PHASE 2 TARGET

0

RM0.006

ILMU speech for a 30 s voice note

1.07M

MSMEs that could use it

~500

automated tests on every commit

Targets are goals, not results. Speech price from the ILMU console (before SST).

6. Business Model

LARIS

KEY PARTNERS

- ILMU (YTL AI Labs): speech and extraction
- RunPod: GPU for vision
- Replit: hosting
- Telegram and Meta: chat channels

KEY ACTIVITIES

- Quote automation
- Reading price lists and photos

KEY RESOURCES

- Rules engine and cost book
- Signed-licence system

VALUE PROPOSITION

- Quote from chat in minutes
- No guessed prices: rules price, AI reads
- Owner approves, audit log keeps the record

RELATIONSHIPS

- Self-serve sign-up
- Owner support in BM and English

CHANNELS

- Telegram and WhatsApp
- Web app
- Trade communities

CUSTOMER SEGMENTS

- Made-to-order micro and small firms
- Signage, printing, 3D printing, fabrication, renovation
- Owners who quote from chat

COST STRUCTURE

- Speech and AI usage (ILMU, about RM0.0002 per second of audio)
- GPU billed only while it runs, plus hosting and chat messages

REVENUE STREAMS

- Subscription per business with seats (signed licence, built). Illustrative: RM39 a month
- Optional per-quote add-ons (price to be validated)

7. Revenue and ROI

LARIS

ILLUSTRATIVE ASSUMPTIONS, TO VALIDATE WITH OWNERS

ASSUMPTIONS

30 quotes a month per business

10 minutes saved per quote (the 50% target)

Time valued at the minimum wage, RM8.72 an hour

Price hypothesis: RM39 per business per month

OWNER ROI

RM43.60

of time saved a month

vs RM39 subscription: covered even at the wage floor, before any margin protected.

OUR ECONOMICS

~RM0.07

variable cost per quote

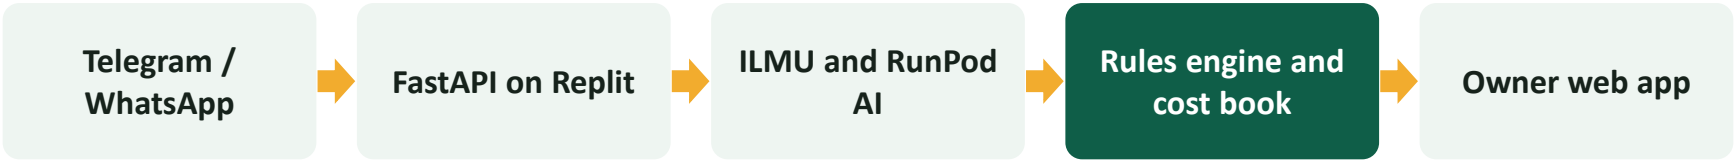

Voice note RM0.006, chat message up to RM0.056, extraction under RM0.01 (est.). About 95% variable margin before hosting and GPU.

100 businesses = about RM46,800 a year **0.1% of MSMEs = about RM0.5M**

Scenarios, not forecasts. Minimum wage RM8.72 an hour (Minimum Wages Order 2024). Voice and chat prices from the ILMU console and a chat-vendor page, before SST; extraction cost is our estimate. GPU US$0.59 an hour, only while running.

8. How It Is Built

LARIS

Replit

Hosts the app, API and PostgreSQL. All secrets live in Replit Secrets.

RunPod

A GPU runs Qwen2.5-VL with vLLM and reads catalog photos. Stopped when idle.

ILMU

Manglish speech-to-text and structured extraction through the ILMU API.

~500

automated tests, green in CI

Live

Telegram bot and web app

Synthetic

data only, PDPA-safe demo

Next, and who we are

LARIS

NEXT

- Connect WhatsApp through Meta
- Per-size prices and quantity tiers
- Time real owners: manual vs LARIS
- Stock levels for "in stock" answers
